

Flex-Op Hydrogen Compressor

New Arrangement for Hydrogen Compressor

FEATURES

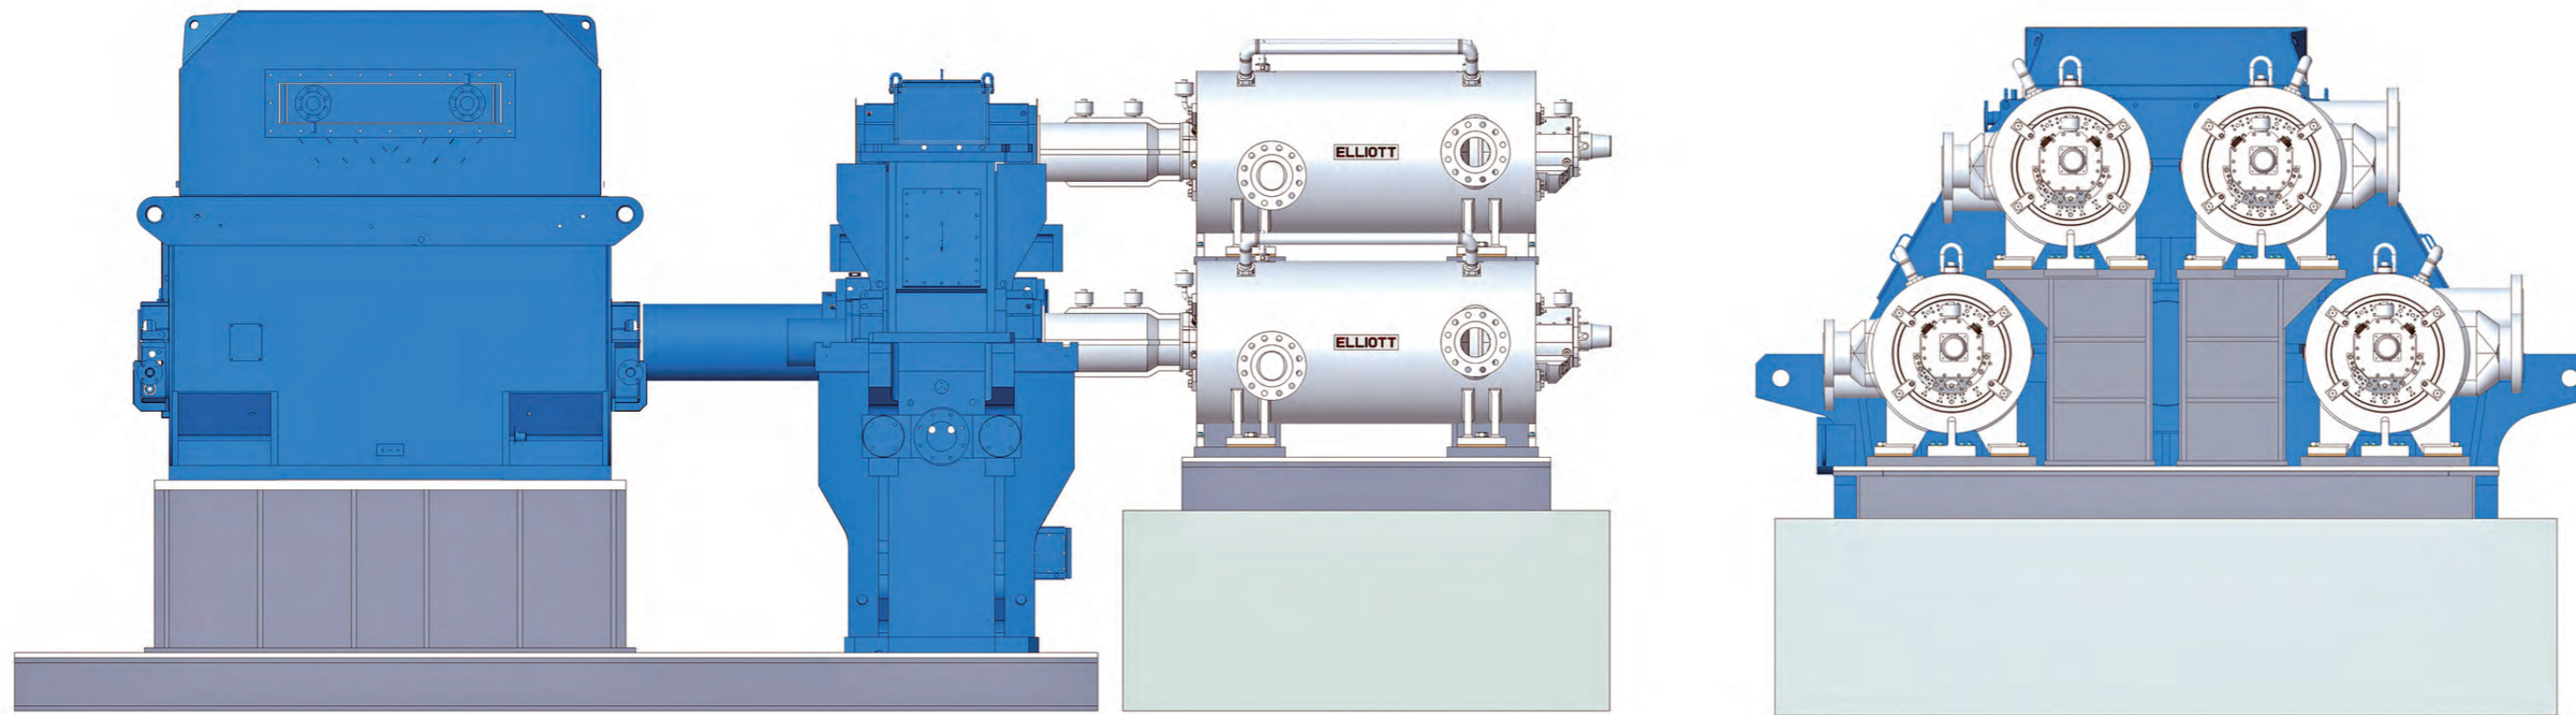

- Flexible with two to four compressor bodies as one unit
- The arrangement is compact and easier to maintain and repair
- Designed to run each compressor at different speeds
- Operationally flexible, with the potential to engage/disengage individual compressors

EBARA ELLIOTT ENERGY developed a new compressor arrangement design to utilize their proven compressor technology

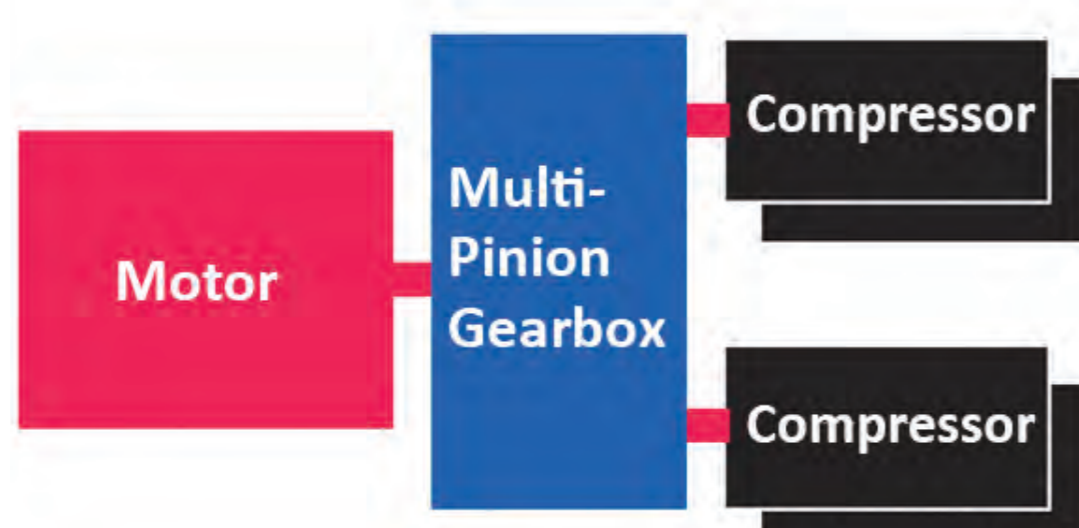

Compressor Arrangement

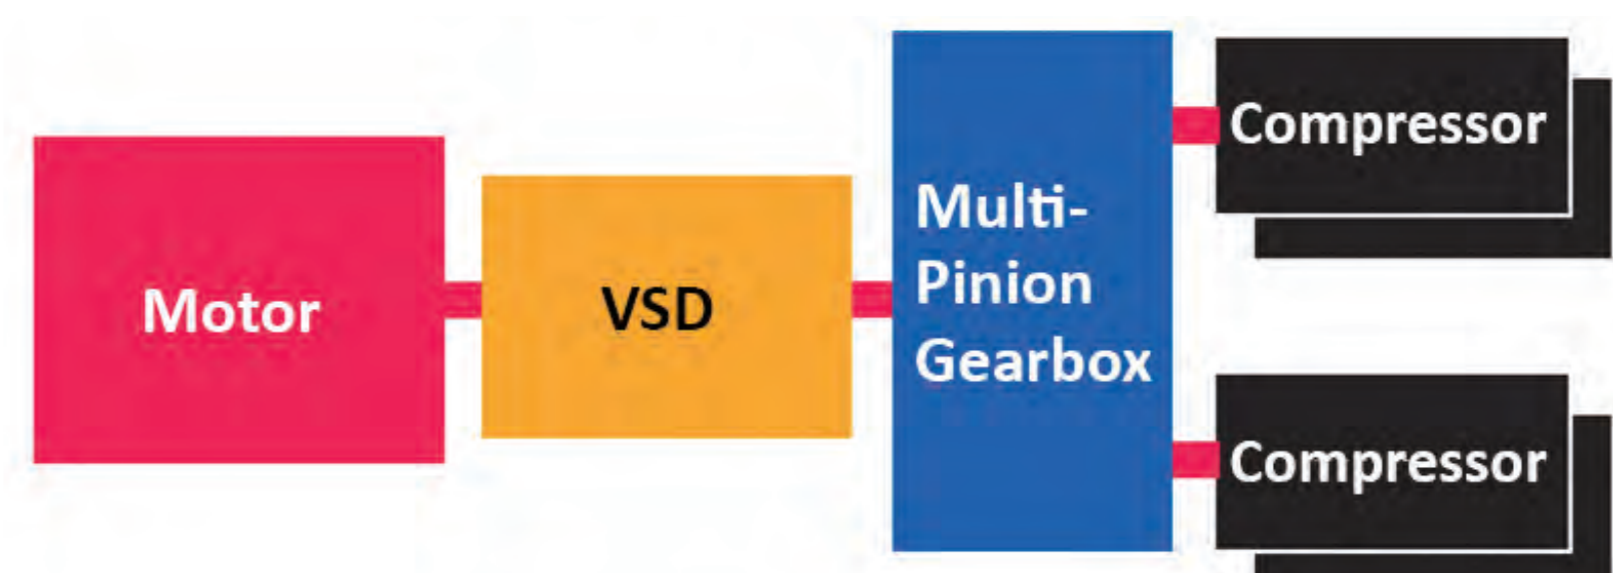

The Flex-Op compressor arrangement allows for flexibility since individual compressors can be either run in series or parallel (or both). This is achieved with three to four individual centrifugal compressors arranged about a single multi-pinion gearbox.

Arrangement Options

Flex-Op 4-Body with VFD

Flex-Op 4-Body with VSD
