

EBARA Machinery India Overhaul and Repair Service

In order to use EBARA pumps with confidence for a long period, periodical disassembly inspection and maintenance at our certified service shops is recommended. If the pumps have not been serviced for a long period, it may suddenly stop due to aging or wear of pump parts. To avoid such situation, it is recommended that disassembly inspection should be carried out from the viewpoint of preventive maintenance.

The high quality overhauling and repair service of pumps can be provided based on our inspection at our certified shops. Pump parts are disassembled and cleaned. Then precise inspection is carried out. After that, we provide the repair procedure based on the inspection and quotation for overhaul / repair to be carried out.

<Major Inspection Menu>
